Publication copy with editorial notices, public references and disclosure edits where applicable.

Status: Mark-authorised editorial/traceability correction record. Author: Codex. Mark approved all part-2 corrections and source updates in this chat. This is not independent technical assurance.

Correction dispositions

Table row 1
ID: D-01
Disposition: Added current kernel catalogue inventories, labelled historical accumulated totals and provided one present document inventory. No count is an execution/coverage claim.

Table row 2
ID: D-02
Disposition: Reconciled the current KX-01-26 index, KX-06 v0.2 and KX-26 v0.2, document-dictionary pointers and historical adoption precedence. Preserved mixed subview revisions for KX-19/20.

Table row 3
ID: D-03
Disposition: Added exact requirement→proposed criterion→existing planned-case navigation for all 362 retained kernel requirements. Existing sensing summary allocations checked; no new sensing obligation inferred. A complete suite-wide semantic adequacy audit is not claimed.

Table row 4
ID: D-04
Disposition: Corrected supplier briefing to Adaptive Operating System.

Table row 5
ID: D-05
Disposition: Marked AOS-22 CAP-01 responsibility/lifecycle, source and supporting claim/example rows as deferred at point of use. General GI/risk/protected duties preserved.

Table row 6
ID: D-06
Disposition: Separated setup, adversarial cross-exposure procedure and expected independence result in AOS-25 VER-015; case ID and requirement coverage retained.

Table row 7

ID: D-07
Disposition: Replaced accumulated opening snapshots with one present editorial orientation and moved prior notices to a labelled provenance appendix; updated adopted README navigation. Historical review documents remain dated evidence.

Table row 8
ID: D-08
Disposition: Clarified 14 recognition, domain interpretation, 02 common record semantics, 13 tracking and 30 human-workflow acceptance/disposition, with original tracking duty retained until accepted transfer.

Table row 9
ID: D-09
Disposition: Clarified AOS-04 REC-X versus AOS-05 CHECK evidence and the existing final_control_check reference in the current index and both dictionaries.

Control and retained limits

Functional document versions and logical interface/view revisions are retained. Each affected source carries a 29 October editorial edition; this record and the current inventory (aos-current-document-inventory-2026-10-29.md) identify the corrected baseline. Earlier citations remain dated baselines, not automatic claims of present compatibility. No requirement, interface or decision ID is retired, reassigned or introduced by these corrections; grouping conformance labels are derived navigation only. Normative requirement statements are checked unchanged.

All cases remain planned/unexecuted. Substantive review questions S-01-09 are not resolved by this work. No architectural decision, parameter, permission, inference exception, appointment, independent assurance, readiness gate or deployment is approved by editorial closure.

Verification and provenance

Before/after originals, exact diffs, hash manifest and validation report are retained in the local AOS/deliverability-review-2026-10-29/documentary-corrections evidence folder. Verification covers preserved normative statements/IDs, existing planned case targets, complete kernel navigation, KX index uniqueness/current revisions, scoped deferral labels, relative destination existence and saved-content read-back. Existing unrelated link/fragment or semantic defects are not silently treated as repaired.
